Trend Micro Debuts World's Broadest Security Services Platform for Organizations Building Applications in the Cloud

Trend Micro Cloud One automates and simplifies cloud security to give organizations the flexibility they need to meet their most strategic cloud priorities

DALLAS--(BUSINESS WIRE)--Trend Micro Incorporated (TYO: 4704; TSE: 4704), the global leader in cloud security, today announced the launch of Trend Micro Cloud One™, a security services platform for organizations building applications in the cloud. Cloud One allows developers to rapidly build applications using the cloud services they want, while managing their organization's risk.

Cloud One delivers the industry's broadest range of security capabilities in a single platform. Designed to help organizations meet their most strategic cloud priorities, it allows customers to migrate existing applications to the cloud, deliver new cloud-native applications and achieve cloud operational excellence. The first-of-its-kind platform has the flexibility to solve immediate customer challenges and the innovation to rapidly evolve with cloud services. At its heart, Cloud One includes the world's leading workload security service that is already in use by thousands of organizations. It is complemented by enhanced container security and brand-new offerings for application security, network security, file storage security and cloud security posture management to ensure cloud infrastructure is optimally configured.

Many cloud security solutions are often hard to manage and deploy, inflexible and fail to provide the level of visibility IT teams need to manage fast-emerging risks.

Trend Micro's all-in-one platform approach is designed to deliver simplified, automated and flexible protection, regardless of where an organization is on the journey to the cloud. Customers using the platform will benefit from a single-sign-on to all services, common user and cloud-service enrolment, visibility from a single console and a common pricing and billing model.

"We have been helping our customers with secure cloud transformation since the birth of the cloud, over a decade ago," said Wendy Moore, vice president of product marketing for Trend Micro. "Customers have a mix of legacy servers, virtualized data centers and newer services such as containers and serverless applications, and all of which can be protected using Cloud One."

Trend Micro's new cloud security platform supports the leading cloud providers, including Amazon Web Services (AWS), Microsoft Azure and Google Cloud.

"As more companies move their infrastructure and applications to the cloud, and adopt a shared responsibility model, we want our customers to have the option of the broadest choice from the best products in the market," said Dave McCann, Vice President, AWS Migration, Marketplace and Control Services at Amazon Web Services, Inc. "Trend Micro's new cloud security platform represents another example of new innovation, that is available via AWS Marketplace. By leveraging AWS Marketplace features like SaaS Contract API, Private Offers, and Consulting Partner Private Offers, customers can contract directly from Trend Micro, or their consulting partners around the world. We are committed to empowering our shared customers with easy and fast procurement and provisioning."

Organizations like Armor in Dallas, Texas, are relying on Trend Micro for strategic cloud security.

"As a security-as-a-service provider, we need to deliver on the security and compliance outcomes our customers demand of Armor. We need powerful, scalable security tools which easily integrate into Armor's cloud security product, Armor Anywhere, to protect our customers' constantly evolving multi-cloud and virtual environments," said Josh Bosquez, CTO for Armor. "Our company's primary goal is to provide security in a dynamic multi-cloud world. We leverage Trend Micro to help us deliver that vision and promise to our customers."

By considering cloud projects and objectives holistically, Trend Micro Cloud One is able to provide enterprise grade security, while leveraging the benefits and efficiencies of the cloud.

The Cloud One platform will be available in Q1 2020 with three services fully integrated: workload security, network security and application security. The other components will be available as stand-alone solutions in Q1 2020 and integrated into Cloud One by the end of 2020.

- Trend Micro Cloud One – Workload Security
- Trend Micro Cloud One – Container Image Security
- Trend Micro Cloud One – File Storage Security
- Trend Micro Cloud One – Network Security
- Trend Micro Cloud One – Cloud Posture Management
- Trend Micro Cloud One – Application Security
