

TrendAI™ Expands Data Center Capabilities to Strengthen Indonesia's AI and Cyber Resilience

New local infrastructure gives Indonesian enterprises full in-country data residency and uninterrupted access to world-class AI security

JAKARTA, Indonesia, 3 August 2026 - TrendAI™ today announced a substantial expansion of its regional capabilities with the official go-live of local data center in Indonesia, hosting its unified AI-powered cybersecurity platform, TrendAI Vision One™, available from July 1, 2026. This deployment marks TrendAI's 12th regional data centre globally, deepening its commitment to infrastructure resilience, localised data residency, and secure digital transformation in Indonesia.

The announcement comes at a pivotal moment as organisations across Indonesia navigate increasingly complex challenges following the full enforcement of the Personal Data Protection Law (UU PDP) alongside OJK's cybersecurity and data localisation guidelines for financial services. In response, TrendAI™'s local infrastructure provides government entities and regulated enterprises, in particular, over 135 banks under OJK supervision, telecommunications, and critical infrastructure sectors, with a locally anchored foundation built to meet the demands of an AI-driven economy.

As the need for stronger national cyber resilience and data protection continues to grow, Indonesia's National Cyber and Crypto Agency (BSSN) has highlighted the importance of strategic technology investments that support local data processing.

Slamet Aji Pamungkas, Deputy for CyberSecurity and Economic Encryption, National Cyber and Crypto Agency (BSSN) stated: "As Indonesia's digital economy accelerates, ensuring national cyber resilience and the protection of critical data infrastructure is paramount. We welcome strategic technology investments that prioritise localised data processing and align with Indonesia's national cyber strategy. Initiatives that support local data residency empower our public and private sectors to securely adopt advanced technologies while maintaining the integrity and confidentiality of the nation's data."

Infrastructure Investment that Reflects a Broader Vision: The Evolution to TrendAI™

The local infrastructure launch aligns with the global March 2026 rebranding of Trend Micro's enterprise business unit to TrendAI™, reflecting a modern reality where AI is foundational infrastructure and cyber risk is a core business priority. This shift marks the completion of the portfolio's transformation into TrendAI Vision One™, a unified enterprise AI cybersecurity platform led by Rachel Jin - Chief Platform & Business Officer, Head of TrendAI™. TrendAI™ is recognized as a market leader across cloud, endpoint, network, and threat detection by Gartner, IDC, and Forrester.

Guided by the principle "Built for AI. Ready for next," TrendAI™ embeds AI across the platform to unify tools, reduce complexity, and enable enterprises to safely redesign their operations with confidence, control, and built-in resilience.

"The launch of our local infrastructure perfectly captures our new identity as TrendAI™," stated **Fetra Syahbana, Country Manager for TrendAI™ Indonesia**. "Building on over three decades of proven leadership that puts our customers first, we are not just bringing a world-class AI platform closer to home. We are empowering Indonesian enterprises to lead the future of AI with proactive, locally resilient security designed to eliminate risk, turning stringent data residency and regulatory compliance into a strategic advantage".

Uncompromised Security with Strict Data Residency

A core pillar of this new local deployment is robust data residency. TrendAI™ guarantees that customer account data and TrendAI Vision One™ security telemetry for Indonesia are stored and processed within the country, with backup and disaster recovery also performed exclusively within Indonesia.

This local hosting supports and helps customers comply with strict UU PDP and OJK requirements. It removes cross-border data transfer obstacles and gives customers' compliance teams a streamlined path for their regulatory efforts, while ensuring they retain full access to TrendAI™'s global threat intelligence. This local deployment is a new capability now available in-region; it is not a mandatory migration for existing Indonesian customers, nor does it replace the customer's own compliance obligations.

Advanced Technical Capabilities Delivered Locally

Indonesian customers will continue to benefit from the complete TrendAI Vision One™ platform experience—a unified AI-powered cybersecurity platform that integrates Cyber Risk Exposure Management (CREM), Security Operations, and proactive AI-driven threat hunting.

The local infrastructure ensures faster, more reliable service through lower latency, without sacrificing protection. Key capabilities include:

- **AI-driven detection and response** powered by global threat intelligence from over 450 researchers and the Zero Day Initiative (ZDI), delivered from Indonesian infrastructure.

- **Zero-trust security architecture** and end-to-end encryption frameworks.
- **Tier-aligned infrastructure** featuring redundancy across power, cooling, and network layers with high-availability compute and storage.
- **Uninterrupted platform experience** handled globally by TrendAI experts, maintaining consistent TrendAI Vision One™ Service Level Agreements.

Empowering the Indonesian Market

With the full enforcement of UU PDP and OJK's sharpened focus on localised cyber resilience, regulated sectors in Indonesia can no longer treat data residency as a secondary priority. By provisioning TrendAI Vision One™ platform locally, critical security telemetry and account data are stored and processed in-region. This deployment allows TrendAI™ to deliver unified AI-powered threat detection and digital twin capabilities with minimal latency, actively helping customers meet their rigorous regulatory requirements without compromising their access to our global threat intelligence ecosystem.

About TrendAI™

TrendAI™, the global AI security leader and enterprise business unit of Trend Micro, empowers organizations with full AI visibility and consolidated security that inspires confidence, drives innovation, and eliminates risk. Trusted by the largest enterprises and governments across 185 countries, TrendAI™ secures the entire organization, from identities to infrastructure to data. AI Fearlessly.
