Analysis of 13 Million Website Defacements Reveals Common Trends

Trend Micro examined website defacement reports from 1998 to 2016 with machine learning technology to identify some long-term trends. Among the most common types of internet attacks is web defacement, where an attacker changes a victim's website to post a message. How are web defacements conducted and are there common trends? Those are some of the questions that a new study released on Jan. 22 by Trend Micro examines.
